

Is any aftercare needed?

It is important to avoid sun exposure and sun beds during the 7 days following the treatment. We recommend using hypoallergenic makeup as well as a sunscreen lotion of minimum 30 SPF.

Enjoy smooth, hairless skin without pain or recovery time!

What conditions does the LumiMax PL treat?

LumiMax PL offers highly effective laser permanent hair removal treatments for any part of the body, from the largest to the most difficult ones to reach.

What does the treatment consist of?

The specialist will first meet with you to assess your skin and establish a treatment plan. He/she will also take photographs before and after the treatment series to prove efficacy. The procedure will begin by applying cold gel to the area, and then delivering light pulses into the skin. The light is absorbed by the melanin, the hair pigment, heating it up in a controlled manner without damaging the skin or causing discomfort. The heat generated destroys the hair follicle, permanently preventing its regrowth.

Incredibly effective for all hair types

Is LumiMax PL safe?

Yes, LumiMax PL is completely safe for all skin types and colors. The light is applied in a precise manner to destroy the hair follicle without damaging the surrounding tissues, eliminating the risk of burns and ensuring a comfortable treatment. Unlike other systems, this procedure has no side effects such as hyperpigmentation, making it an ideal option for darker skin types. After the treatment session, you can resume your daily activities without the need for recovery time.

What areas of the body can be treated?

LumiMax PL effectively removes unwanted hair from any part of the body, from the largest like legs, arms and back, to the smallest such as the bikini line, the underarms and the upper lip. The LumiMax PL also treats hard to reach areas such as the nostrils and ears.

How many treatment sessions do I need?

Depending on the area that is being treated, 3 to 6 sessions are generally required. The time between sessions also varies according to the treatment area. In areas such as the upper lip, where hair grows very quickly, a period of 4 to 6 weeks is needed between each session. In body areas such as the back, where hair growth is slower, treatment sessions are performed every 6- 8 weeks.

The fastest and most comfortable permanent hair removal system available

What results can I expect?

After the treatment is completed, the hair will remain in its place, and for about 10 days it will appear as if it is still growing but at a slower pace. The treated hair will fall off naturally around one to three weeks after, leaving the skin feeling smoother. At the end of the treatment series the LumiMax PL will have removed 90% of the hair.
