

What is the aftercare?

The patient will be able to resume his/her daily activities immediately after the treatment. To maintain the results, we recommend using a glove to rub or a daily massage with a luffa glove to help stimulate blood and lymphatic circulation between treatments. It is important to exercise regularly, reduce the consumption of sugar, saturated fat and salt, and increase the consumption of fruits and dietary fiber contained in whole grains and vegetables. We also recommend drinking plenty of water. To maintain the results of the facial rejuvenation procedure, we recommend limiting UV exposure and applying sunscreen lotion of minimum 50 SPF daily.

What conditions does the LipoMax treat?

LipoMax offers safe and effective treatments including body contouring, cellulite reduction, skin tightening, butt lift and facial rejuvenation.

What does the treatment consist of?

The specialist will first meet with the patient to perform a skin assessment and decide on a treatment plan. He/she will proceed to take pictures and write down the patient's weight and measurements, and will also do this after the treatment series has been completed in order to prove its efficacy. The procedure will begin by sliding the handpiece over the treatment area to apply a combination of vacuum massage, visible LED light and radiofrequency energy. The vacuum massage relaxes the tissues, improves blood flow and eliminates waste from the body to reduce cellulite and remove fat deposits without causing pain or discomfort. The LED light penetrates deep into the skin to stimulate its repair and regeneration mechanisms, while the radiofrequency energy heats up the different layers of the skin to rejuvenate and tighten it by increasing collagen production. After the treatment has been completed, you can return to your regular activities without any downtime.

Return to your regular routine immediately without the need for recovery time

Is LipoMax safe?

LipoMax is a comfortable and pleasant procedure, and it is completely safe for any skin type or color. It treats the deeper layers of the skin to address multiple conditions without causing pain, damage or burns.

Lift buttocks | Reduce circumference

Smooth cellulite | Define waistline

Flatten and define abdomen

Tighten lax skin | Reduce bra line bulges

Contour arms | Define jawline

What parts of the body can be treated?

LipoMax is ideal for treating common problem areas such as buttocks, thighs, hips, abdomen, waist, back and arms, reducing localized fat, cellulite, and laxity to achieve a slimmer more beautiful figure from the very first treatment. Its innovative facial applicator fights the signs of aging in both face and neck, restoring its youthful smoothness, firmness, and elasticity for a natural lifting effect without surgeries.

How many treatment sessions do I need?

You will need 6 or more sessions twice a week depending on the severity of the problem. After that we recommend one session a month to maintain your treatment results.

Enjoy a slimmer figure and younger looking skin in just 30 minutes per session

What results can be expected?

By the end of the body treatment series the figure is reshaped and looks slimmer and slender due to a reduction in localized fat on areas such as thighs, hips, abdomen and waist. The appearance of cellulite significantly diminishes and saggy buttocks are lifted, achieving a more beautiful and defined body. Once the facial treatment has been completed, the skin is firmer, smoother and more elastic creating a lifting effect without surgeries. To achieve long-lasting results it is important to maintain healthy eating habits and lifestyle, as well as regular exercise routine.
